DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-37 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Lewis et al (U.S. Patent No. 6,233,565).

4. As per claim 1-5, 10, 12, 19, 24-29, 30, 35 and 36, Lewis et al teach a method of printing a VBI such as a ticket, a coupon, a mail piece, a travelers, check or a currency, comprising generating a message digest by hashing relevant 2-D bar code information (*see fig 4A, 4B*), and generating a textual digital signature from the message including a stateless cryptomodule and a plurality of user computer in communication with the cryptomodule to communication digital signature, communicating the digital signature from one of a plurality of stateless cryptomodules

Art Unit: 3621

to one of a plurality of remotely (*remote psds, 20n*) located user computers (*client, customer computer, 2n*), each stateless cryptomodule being programmable to service any of the plurality of repeatedly located user computers (*see figs 1-3 and their accompany text*).

5. As per claims 6-9, 13-16, 20-23 and 31 -34, Lewis et al teach a method of the digital signature and the 2-D bar code include sides (such as right, left, top and bottom) (*see figs 1-3 and their accompany text*).

6. As per claims 11 and 37, Lewis et al teach a method wherein the relevant information including one or more of indicium version number, an algorithm identifier, a certificate serial number, a postage security device manufacturer identifier, a model identifier, postage device serial number, an ascending register value (*see figs 1-3 and their accompany text*).

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 3621

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
